A data structure is a specialized format for organizing and storing data. A string uses an array as an underlying data structure to store bytes of characters. Therefore, it is a data structure, because it is a wrapper for an array of characters. Strings are all around us.

Organised data can be easily sorted, ordered, and searched to retrieve information that meets certain requirements. In Introduction to Data Structures, you'll learn the fundamentals of creating data structures, and gain exposure to coding and visualising data structures. You'll explore the importance and impact of well organised data.
